

Synovium® Hippichol

INSTRUCTIONS

Horse and pony: add 100 ml to the feed daily, feed for 10 days.

Not suitable for foals

1 litre bottle = 100ml daily 10 supply days (one full course). (£3.10 per day)

Hippochole supports healthy liver & kidney function. The liver is essential for a horse to stay healthy; aiding in optimal metabolism and breaking down of toxins. A detox combats the effects of stress and environmental factors your horse is exposed to on a daily basis. Synovium understands this, developing Hippochole to 'reset' the entire body.

Hippochole Choline is the semi essential ingredient needed for the production of lecithine (animal cell membranes) and acetylcholine (neurotransmitter). Hippochole provides the correct levels of choline and methionine to support liver function recovery.

The ingredients of this product are not listed on the FEI Clean Sport prohibited substance database list.

COMPOSITION

Choline 150 mg / litre, Methionine 10 mg / litre
