

# Synovium® Lactaplus Paste

## INSTRUCTIONS

**Horse:** add to the feed 1 time per week or give directly into the mouth of the horse.

During competition: one syringe the day before the competition and one syringe on the day of the competition.

**Pony:** add to the feed 1 time per week or give directly into the mouth.

During competition: half a syringe the day before the competition and half a syringe on the day of the competition.

Not suitable for foals.

**Lactaplus Paste 60g Syringe**

**LACTAPLUS PASTE** provides horse muscle recovery when most needed. It is suitable for horses undergoing intense physical exertion. Designed to help with build-up of lactic acid and help speed up recovery. Contains L-Carnitine an essential cofactor in muscle metabolism and muscle energy.

Lactaplus Paste is quickly absorbed and ideally should be given just before exercise.

*\*\*The ingredients of this product are not listed on the FEI Clean Sport prohibited substance database list. Take into account the applicable rules of your federation during competitions\*\**
